SUBJECT/OBJET **RESULTS OF BIG SHOT CHALLENGE/DÉFI-ÉCHEC
À LA GRIPPE :INFLUENZA IMMUNIZATION PROGRAM
FOR RESIDENTS AND STAFF OF LONG-TERM CARE
FACILITIES**

DEPARTMENTAL RECOMMENDATION

That the Community Services Committee recommend Council receive this report for information.

BACKGROUND

Last winter, Ottawa-Carleton had a second widespread, approximately 12 weeks long outbreak of A/Sydney/5/97-like (H3N2) influenza likely affecting 25% of the population among all age groups. There were laboratory confirmed outbreaks in 22 long-term care facilities providing health and residential care with 16 related deaths, compared to 21 outbreaks with 45 deaths the year before. This wasn't the only recent example of the toll influenza can take. Ottawa-Carleton and the rest of the Champlain District Health Council area, (Pembroke through to Cornwall), rated 12 among 16 major Canadian centres for winter 1996/97 hospitalizations due to pneumonia and influenza among seniors, (*Maclean's* June 7, 1999 Health Report based on data from the Canadian Institute for Health Information).

As one means to improve the situation, the Region of Ottawa-Carleton Health Department, Homes for the Aged in Ottawa-Carleton, Ontario Nursing Home Association (Region 2), Ontario Residential Care Association (Region 2) and the Ottawa-Carleton Community Care Access Centre asked all long-term care facilities and health care (staffing) agencies to participate in a BIG SHOT CHALLENGE/DÉFI-ÉCHEC À LA GRIPPE! While facilities have always tried to immunize residents against influenza, the

value of staff immunization has been confirmed by a randomized study in England where immunizing 61% of staff reduced the influenza death rate in residents by 41% as a result of herd immunity. In addition, immunization reduces sick leave among staff due to influenza by approximately 40%. Evidence from cohort and randomised controlled trials suggests that each dose of vaccine yields a 1-2 hour decrease in lost work time, an average cost saving of approximately \$40 per immunized employee.

Thus the **goal** was to immunize at least **90% of residents and 70% of employees**, contract staff, students doing placement work, volunteers and health professionals coming into homes for the aged, nursing homes, chronic care facilities/units and retirement residences where care/assistance in the activities of daily living is provided. This applied to all employees etc. who may have the potential for acquiring or transmitting influenza during the course of their work, and not just to those employees providing direct resident care. Last season, 36% of facility staff were immunized on average. However, 10 facilities did reach or exceed the 90% and 70% marks.

RESULTS

Overall, the challenge was a remarkable success! The commitment and creativity of long-term care facility management, attending physicians, staff and residents to increase immunization rates was outstanding. Among 72 facilities legally designated as homes for the aged, nursing homes or retirement residences, **91% of residents and 77% of staff** are now immunized against influenza. BIG SHOT CHALLENGE/DÉFI-ÉCHEC À LA GRIPPE plaques are being awarded to 5 homes for the aged, (including the three homes operated by Regional government), 8 nursing homes, 28 retirement residences and 14 health care (staffing) agencies, (Annex A). Honourable mention for immunizing 60-69% of staff must be made for another 2 homes for the aged, 1 nursing home, 9 retirement residences and 3 health care (staffing) agencies, (Annex B).

The benefits are already apparent. The first laboratory confirmed influenza case in the Region was reported in a child on November 29th. The first long-term care facility outbreak began December 12th with A/Sydney/5/97-like (H3N2) influenza, back for its third year of outbreaks. Facility outbreaks to date have been small with mild illness in affected residents and no deaths.

During outbreaks, only persons who are immunized or taking anti-viral medication are allowed to work in the facility, (or affected part of very large facilities). Such exclusion is required in homes for the aged and nursing homes, as of November 1, 1999, by the Ontario Ministry of Health and Long-Term Care. It is strongly recommended by the Region of Ottawa-Carleton Health Department for retirement residences and chronic care hospitals.

In the unlikely event that someone insists on working when they should not, Health Department staff will meet with the person and if necessary use the *Ontario Health Protection and Promotion Act* to order him/her from working in any long-term care facility in the region with an influenza outbreak. The use of such orders is supported by the September, 1999 *Recommendations of the Ontario Working Group on Influenza* issued by the Ministry of Health and Long-Term Care.

Given this year's success with BIG SHOT CHALLENGE/DÉFI-ÉCHEC À LA GRIPPE, it should be repeated in the fall of 2000. Acute care hospitals will be invited to participate as the Ontario Ministry of Health and Long-Term Care recently announced that Public Health Branch funded influenza vaccine is now available for staff working in acute care hospitals. Previously, the hospital's global budget was expected to cover this expense.

PUBLIC CONSULTATION

This campaign was developed as a collaboration of the Health Department, Homes for the Aged in Ottawa-Carleton, Ontario Nursing Home Association (Region 2), Ontario Residential Care Association (Region 2) and the Ottawa-Carleton Community Care Access Centre. Several meetings have been held since April with relevant associations, individual facilities and health care (staffing) agencies, post-secondary educational institutions and representatives of labour unions in order to develop a program with widespread support. The BIG SHOT CHALLENGE/DÉFI-ÉCHEC À LA GRIPPE campaign has had a strong health promotion focus involving all above-mentioned partners and 114 facilities/agencies. Key health promotion strategies were implemented to address barriers to staff immunization: 1) resource development/mailouts (flyers, posters, presentation materials); 2) orientation sessions; 3) media promotion e.g television/radio interviews, Flu Information Line; 4) advocacy, and; 5) individual consultation.

FINANCIAL IMPLICATIONS

Vaccine was supplied by the Ontario Ministry of Health and Long-Term Care. Individual facilities and physicians provided additional supplies. Funds were available in Account 151511 for the plaques.

CONCLUSION

Ottawa-Carleton long-term care facilities doubled staff influenza immunization rates this year. This will help reduce the previous, unacceptably high resident mortality rate due to influenza.

*Approved by
Dr. Robert Cushman*

**1999 BIG SHOT CHALLENGE/DÉFI-ÉCHEC À LA GRIPPE
AWARD RECIPIENTS**

Algonquin College	Orchard View Living Centre
Bearbrook Court Retirement Residence	Osgoode Care Centre
Billings Lodge	Para-Med Health Services Inc.

Extract of Draft Minute
Community Services Committee
20 January 2000

1. RESULTS OF BIG SHOT CHALLENGE/DÉFI-ÉCHEC À LA GRIPPE
- Medical Officer of Health report dated 29 Dec 99

The Committee Chair, A. Munter, began by thanking Health Department staff, specifically Dr. Ed Ellis, Associate Medical Officer of Health, Ms. Carol Sly, Public Health Nurse and Cassandra Crowder, Information and Public Affairs for their efforts during the campaign. Chair Munter called the Big Shot Challenge a successful and important campaign. He indicated that the flu vaccine was provided by the Province of Ontario, and he pointed out there is no reason why it cannot be more widely provided, free of charge. Chair Munter said the cost of the vaccine is \$8.00 per unit and he compared this to the cost of one night's hospitalization which is \$800 dollars. Chair Munter acknowledged and thanked the Regional Chair, Bob Chiarelli, for his leadership and support in putting funds back into public health.

Chair Chiarelli said he was proud of the leadership shown by the Medical Officer of Health, Dr. R. Cushman and the Health Department, noting their efforts have slowed down the incidence of influenza. He pointed out that the number of agencies participating in the Big Shot Challenge grew from 55 in 1998 to 72 in 1999 and he said the Health Department should be proud of its success. Chair Chiarelli also thanked all the agencies that participated in the program.

Dr. Ellis paid special tribute to all the staff involved in the program. He pointed out there are still people with concerns about flu vaccinations, but, notwithstanding this, 99% of residents and 77% of staff in long term care facilities were inoculated. Dr. Ellis expressed the hope the Health Department can continue with this program. Dr. Cushman added his congratulations to all participants, and he highlighted the contribution made by Dr. Ellis and by Ms. Sly.

At this point, Chair Munter invited several of his colleagues on Council to present awards to 39 participating agencies and he acknowledged the participation of several other agencies who received honourable mentions. A complete list of award recipients is kept on file with, and available from, the Committee Co-ordinator.

That the Community Services Committee recommend Council receive this report for information.
